Canadian Data Report of Fisheries and Aquatic Sciences 1087

Pêches et Océans Fisheries and Oceans

Canada

Rapport statistique canadien des sciences halieutiques et aquatiques

Les rapports statistiques servent à classer et à archiver les compilations de données pour lesquelles il y a peu ou point d'analyse. Ces compilations auront d'ordinaire été préparées à l'appui d'autres publications ou rapports. Les sujets des rapports statistiques reflètent la vaste gamme des intérêts et des politiques du ministère des Pêches et des Océans, c'est-à-dire les sciences halieutiques et aquatiques.

Les rapports statistiques ne sont pas destinés à une vaste distribution et leur contenu ne doit pas être mentionné dans une publication sans autorisation écrite préalable de l'établissement auteur. Le titre exact paraît au-dessus du résumé de chaque rapport. Les rapports statistiques sont résumés dans la revue *Résumés des sciences aquatiques et halieutiques*, et ils sont classés dans l'index annuel des publications scientifiques et techniques du Ministère.

Les numéros 1 à 25 de cette série ont été publiés à titre de relevés statistiques, Services des pêches et de la mer. Les numéros 26 à 160 ont été publiés à titre de rapports statistiques du Service des pêches et de la mer, ministère des Pêches et de l'Environnement. Le nom actuel de la série a été établi lors de la parution du numéro 161.

Les rapports statistiques sont produits à l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement auteur dont le nom figure sur la couverture et la page du titre. Les rapports épuisés seront fournis contre rétribution par des agents commerciaux.

Canadian Data Report of Fisheries and Aquatic Sciences

Data reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of data reports reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries and aquatic sciences.

Data reports are not intended for general distribution and the contents must not be referred to in other publications without prior written authorization from the issuing establishment. The correct citation appears above the abstract of each report. Data reports are abstracted in *Aquatic Sciences and Fisheries Abstracts* and indexed in the Department's annual index to scientific and technical publications.

Numbers 1–25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26–160 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Data Reports. The current series name was introduced with the publication of report number 161.

Data reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page. Out-of-stock reports will be supplied for a fee by commercial agents.

ABSTRACT

Bottom and surface water temperature was monitored using data loggers every two hours from early spring to late fall. Temperature monitoring stations were located in coastal waters of the southern Gulf of St. Lawrence. From 1998 to 2000, only bottom water temperature was recorded. Since 1999, the temperature recorders have been attached to navigational buoys. The data collected from 1996 to 2000 are presented in tables using mean daily temperature and accumulated degree-days. Mean daily temperatures and monthly accumulated degree-days are presented for each monitoring station from 1996 to 2000.

Key words: sea temperature, environmental parameter

RÉSUMÉ

Les températures de l'eau de fond et de l'eau de surface ont fait l'objet d'un relevé avec système d'aquisisition de données, aux deux heures tous les jours, du début du printemps à la fin de l'automne. Des postes de surveillance de la température étaient situés dans les eaux côtières du sud du golfe du Saint-Laurent. De 1998 à 2000, seule la température de l'eau de fond a été enregistrée. Depuis 1999, les enregistreurs de température ont été attachés aux bouées d'aide à la navigation. Les données prélevées de 1996 à 2000 sont présentées sous forme de tableaux; l'on a utilisé la température moyenne de chaque jour et l'accumulation de degrés-jour. Le présent rapport donne les températures moyennes quotidiennes et l'accumulation mensuelle de degrés-jour pour chaque poste de surveillance, de 1996 à 2000.

Mots clés : température de l'eau, paramètres environmental

1.0 INTRODUCTION

In 1995, a coastal temperature monitoring program was initiated by the Gulf Region lobster research group of the Department of Fisheries and Oceans (DFO), located in Moncton NB. Temperature data were collected from coastal waters in New Brunswick, Prince Edward Island, Gulf shore of Nova Scotia and Cape Breton. The objective of the program is to gather environmental coastal data to better understand fluctuations in water temperature and its effect on coastal marine species, especially commercially exploited species. Temperature data collected in 1995 are available in a data report published in 1996 (Lanteigne et al. 1996).

Data collected between 1996 and 2000 from the coastal temperature monitoring stations across the southern Gulf of St Lawrence are presented in this report. In addition, a brief history of the deployment techniques used during the beginning of the program is given.

2.0 MATERIALS AND METHODS

The electronic temperature recording data loggers used for the monitoring program are the programmable Vemco Minilogs™. All loggers were programmed to record temperature data every two (2) hours. Specifications for the recorders are described in Lanteigne et al. (1996).

From 1996 to 1998, all recording loggers were set on independent mooring systems which consisted of anchors, anchor lines and surface buoys (Petrie and Dobson 1985). For each mooring system, bottom temperature was recorded with apparatus set along the anchor line at one (1) meter from the bottom. For some sampling sites, surface temperature was also recorded by having recorders set at two (2) meters from the surface. DFO staff and local fishermen performed deployment and recovery of the mooring systems and recorders. The position of each mooring system was recorded using a Global Positioning System (GPS).

Using the mooring systems, the number of temperature recorders were recovered and there numbers varied from year to year. In some years, up to 50% of the recorders were lost. This explains the lack of continuity in the data set for certain areas or stations. The loss of equipment can be attributed to different factors. Fouling on the rope and buoy was observed to weigh down the surface buoy and sinked out of sight, below the surface. Chaffing and wear of the rope at the point of attachment was also observed. In heavy current, some mooring systems were displaced. Finally, there are human interventions whether it is mischievous or accidental that could also contribute to some loss of equipment.

In 1999, a different approach was used to deploy and recover the temperature recorders. Recorders were mounted in a steel protective housing unit (Fig. 1) and attached to the mooring system of some of the major navigational buoys. The Canadian Coast Guard, the agency responsible to deploy these buoys conducted the installation of the housing units/recorders on the anchors of pre-assigned navigational buoys. For most buoys, deployment is normally conducted in the early spring (April – May), depending on the ice condition in the Gulf of St. Lawrence. The buoys removal is conducted in late fall of the same year (November). Once recovered, the recorders are sent to DFO (Lobster Research Group) in Moncton where the data is retrieved, formatted and added to the database.

3.0 DATA PRESENTATION

The site positions of each temperature monitoring station are presented in Tables 1-5 and in Fig. 2. For each site, the complete data set is presented showing mean daily temperature, standard deviation, daily minimum and maximum temperature and accumulated monthly degree days. One graph is presented for each location showing the daily mean bottom and surface temperature when it is available.

The accumulated degree-days were calculated using the following equations: (Dobson and Petrie 1985)

$$ADD = (T - T\ ref) \times Time$$

Where T = mean daily temperature
T ref = reference temperature (0 °C and 4 °C)
Time = time period in days

The ADD was used to calculate the monthly accumulated degree days.

4.0 ACKNOWLEDGEMENTS

The authors would like to thank everyone Wade Landsburg, Guy Robichaud, Gilles Paulin, Denis Gagnon and other DFO staff as well as the fishermen that helped in the deployment of the temperature recorders in the initial years of the program. Thanks go to Michel Comeau for the use of unpublished temperature data from Anse Bleue. Special thanks to David MacKinnon and his staff at the Canadian Coast Guard Base in Charlottetown for their support and ongoing help in the deployment and retrieval of the temperature recorders.
